

## Standard derived equivalences

**Xiao-Wu Chen**

University of Science and Technology of China

We are interested in the well-known open problem on whether any derived equivalence is standard. The notions of D-standard abelian categories and K-standard additive categories arise naturally. We will summarise some progress. In particular, following Ballard's work, we prove that the triangle automorphism group of the bounded derived category of a finite dimensional algebra is isomorphic to the one for the perfect derived category.
